## **Scanfiber Composites A/S protects new frigate from the Royal Danish Navy**

*The Danish Defence Acquisition and Logistics Organization (DALO) has chosen Scanfiber Composites A/S as supplier for ballistic protection to protect the new danish frigate 'Peter Willemoes'.*

The danish company, Scanfiber signed a contract for ballistic protection of heavy machinegun mounts to the new danish frigate 'Peter Willemoes'. Scanfibers' advanced customised solutions convinced DALO that Scanfiber was the right choice for ballistic protection.

In January, DALO signed over the new danish frigate 'Peter Willemoes' to the Royal Danish Navy. This is one of three new frigates to the Navy in the new danish Iver Huitfeldt class and is designed to resolve both national and international missions. Scanfiber was chosen to deliver ballistic protection to the new frigate with delivery and mounting in April 2014.

In 2012, Scanfiber completed a similar order to the danish frigate Iver Huitfeldt for the Danish Defence Acquisition and Logistics Organization. The execution and high quality of this project was the reason why Scanfiber won the contract of the new vessel.

The danish company, Scanfiber Composites A/S, specialises in the development and manufacturing of customised light-weight armour solutions to a large variety of customers within the military as well as the civilian sector. Highly customised solutions and top quality are important aspects for Scanfiber.
